

2024 Land Use Inventory Report

Summary

The City of Bozeman Department of Community Development (DPCD) prepares an annual report of land use within the City. The report cross tabulates how the area within each parcel and within each zoning district is used. Use is measured in acres. Any established use on the site means the area of the entire parcel shows as occupied. All use and area values are rounded to the nearest tenth of an acre.

Shown in the following tables is the updated land use inventory for the City of Bozeman from December 31, 2014 through December 31, 2024. A map is included at the end of the report. The current land use information for individual parcels is available through the interactive geographic information system hosted on the City's website, www.bozeman.net.

The land use classifications and zoning definitions are described below. Zoning districts are established by the City Commission through the adoption of ordinances. The description of land use classifications is prepared by the Department of Community Development. A revised set of classifications was prepared in 2010 and appear in all data tables. A new zoning classification of Planned Development Zone has been created. These are unique zoning packages specific to individual projects. The uses are classified as usual but the PDZ column may reflect a wide range of uses. Please contact the Department if you have questions on specific PDZ locations.

The descriptor shown in parentheses in the list of land use classifications is the value contained in the geographic information system tables used to track the inventory. The descriptors are used in the table row labels due to space constraints. The detailed description of uses allowed in the zoning districts and related development standards are available through the City's Unified Development Ordinance. Please contact the Department of Community Development if you have questions on this information.
